Morning (Time: 1 hour 30 minutes) Paper reference **WST01/01**

Mathematics

International Advanced Subsidiary/Advanced Level

Statistics S1

You must have:
Mathematical Formulae and Statistical Tables (Yellow), calculator

Total Marks

Candidates may use any calculator permitted by Pearson regulations. Calculators must not have the facility for symbolic algebra manipulation, differentiation and integration, or have retrievable mathematical formulae stored in them.

Instructions

- Use **black** ink or ball-point pen.
- If pencil is used for diagrams/sketches/graphs it must be dark (HB or B).
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions and ensure that your answers to parts of questions are clearly labelled.
- Answer the questions in the spaces provided
– *there may be more space than you need.*
- You should show sufficient working to make your methods clear. Answers without working may not gain full credit.
- Values from the statistical tables should be quoted in full. If a calculator is used instead of the tables, the value should be given to an equivalent degree of accuracy.
- Inexact answers should be given to three significant figures unless otherwise stated.

Information

- A booklet 'Mathematical Formulae and Statistical Tables' is provided.
- There are 6 questions in this question paper. The total mark for this paper is 75.
- The marks for **each** question are shown in brackets
– *use this as a guide as to how much time to spend on each question.*

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.
- If you change your mind about an answer, cross it out and put your new answer and any working underneath.

Pearson

1. A researcher is investigating the growth of two types of tree, Birch and Maple. The height, to the nearest cm, a seedling grows in one year is recorded for 35 Birch trees and 32 Maple trees. The results are summarised in the back-to-back stem and leaf diagram below.

Totals	Birch		Maple	Totals
(2)	9 8	2	5 7 7 8 9	(5)
(8)	9 9 9 6 5 3 1 1	3	0 2 6 6 8 9 9	(7)
(9)	9 8 8 7 6 3 1 1 1	4	1 1 1 <i>k</i> 7 8	(6)
(9)	7 7 7 5 4 3 2 1 0	5	0 1 2 3 4 4 4	(7)
(3)	7 6 5	6	3 4 6	(3)
(3)	6 5 4	7	0 7	(2)
(1)	5	8	0 0	(2)

Key: 5 | 6 | 3 means 65 cm for a Birch tree and 63 cm for a Maple tree

The median height that these **Maple** trees grow in one year is 45 cm.

- (a) Find the value of *k*, used in the stem and leaf diagram. (1)
- (b) Find the lower quartile and the upper quartile of the height grown in one year for these **Birch** trees. (2)

The researcher defines an outlier as an observation that is

$$\text{greater than } Q_3 + 1.5 \times (Q_3 - Q_1) \text{ or less than } Q_1 - 1.5 \times (Q_3 - Q_1)$$

- (c) Show that there is only one outlier amongst the Birch trees. (2)

The grid on page 3 shows a box plot for the heights that the Maple trees grow in one year.

- (d) On the same grid draw a box plot for the heights that the Birch trees grow in one year. (4)
- (e) Comment on any difference in the distributions of the growth of these Birch trees and the growth of these Maple trees.
State the values of any statistics you have used to support your comment. (1)

The researcher realises he has missed out 4 pieces of data for the **Maple** trees. The heights each seedling grows in one year, to the nearest cm, in ascending order, for these 4 Maple trees are 27 cm, *a* cm, 48 cm, 2*a* cm.

Given that there is no change to the box plot for the **Maple** trees given on page 3

- (f) find the range of possible values for *a*
Show your working clearly. (3)

This image shows a single sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

Turn over for spare grid if you need to redraw your answer for part (d)

Handwriting practice lines for Question 1 continued.

Only use this grid if you need to redraw your answer for part (d)

(Total for Question 1 is 13 marks)

2. A spinner can land on the numbers 2, 4, 5, 7 or 8 only.

The random variable X represents the number that this spinner lands on when it is spun once. The probability distribution of X is given in the table below.

x	2	4	5	7	8
$P(X=x)$	0.25	0.3	0.2	0.1	0.15

- (a) Find $P(2X - 3 > 5)$

(1)

Given that $E(X) = 4.6$

- (b) show that $\text{Var}(X) = 4.14$

(3)

The random variable $Y = aX - b$ where a and b are positive constants.

Given that

$$E(Y) = 13.4 \quad \text{and} \quad \text{Var}(Y) = 66.24$$

- (c) find the value of a and the value of b

(4)

In a game Sam and Alex each spin the spinner once, landing on X_1 and X_2 respectively.

Sam's score is given by the random variable $S = X_1$

Alex's score is given by the random variable $R = 2X_2 - 3$

The person with the higher score wins the game. If the scores are the same it is a draw.

- (d) Find the probability that Sam wins the game.

3. The lengths, x mm, of 50 pebbles are summarised in the table below.

Length	Frequency
$20 \leq x < 30$	2
$30 \leq x < 32$	16
$32 \leq x < 36$	20
$36 \leq x < 40$	8
$40 \leq x < 45$	3
$45 \leq x < 50$	1

A histogram is drawn to represent these data.

The bar representing the class $32 \leq x < 36$ is 2.5 cm wide and 7.5 cm tall.

- (a) Calculate the width and the height of the bar representing the class $30 \leq x < 32$ (3)
- (b) Using linear interpolation, estimate the median of x (2)

The weight, w grams, of each of the 50 pebbles is coded using $10y = w - 20$
 These coded data are summarised by

$$\sum y = 104 \qquad \sum y^2 = 233.54$$

- (c) Show that the mean of w is 40.8 (2)
- (d) Calculate the standard deviation of w (4)

The weight of a pebble recorded as 40.8 grams is added to the sample.

- (e) Without carrying out any further calculations, state, giving a reason, what effect this would have on the value of
- (i) the mean of w
- (ii) the standard deviation of w (3)

6. The Venn diagram shows the probabilities related to teenagers playing 3 particular board games.

C is the event that a teenager plays Chess

S is the event that a teenager plays Scrabble

G is the event that a teenager plays Go

where p and q are probabilities.

- (a) Find the probability that a randomly selected teenager plays Chess but does not play Go.

(1)

Given that the events C and S are independent,

- (b) find the value of p

(4)

- (c) Hence find the value of q

(2)

- (d) Find (i) $P((C \cup S) \cap G')$

(1)

- (ii) $P(C | (S \cap G))$

(2)

A youth club consists of a large number of teenagers.
In this youth club 76 teenagers play Chess and Go.

- (e) Use the information in the Venn diagram to estimate how many of the teenagers in the youth club do not play Scrabble.
