Wednesday 23 October 2019

Morning (Time: 1 hour 30 minutes)

Paper Reference **WME01/01**

Mathematics

International Advanced Subsidiary/Advanced Level
Mechanics M1

You must have:

Mathematical Formulae and Statistical Tables (Blue), calculator

Total Marks

Candidates may use any calculator permitted by Pearson regulations. Calculators must not have the facility for symbolic algebra manipulation, differentiation and integration, or have retrievable mathematical formulae stored in them.

Instructions

- ☒ Use **black** ink or ballpoint pen.
- ☒ If pencil is used for diagrams/sketches/graphs it must be dark (HB or B).
- ☒ **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- ☒ Answer **all** questions and ensure that your answers to parts of questions are clearly labelled.
- ☒ Answer the questions in the spaces provided
- ☒ *there may be more space than you need.*
- ☒ You should show sufficient working to make your methods clear.
- ☒ Answers without working may not gain full credit.
- ☒ Whenever a numerical value of g is required, take $g = 9.8 \text{ m s}^{-2}$, and give your answer to either 2 significant figures or 3 significant figures.

Information

- ☒ A booklet **Mathematical Formulae and Statistical Tables** is provided.
- ☒ There are 8 questions in this question paper. The total mark for this paper is 75.
- ☒ The marks for each question are shown in brackets
- ☒ *use this as a guide as to how much time to spend on each question.*

Advice

- ☒ Read each question carefully before you start to answer it.
- ☒ Try to answer every question.
- ☒ Check your answers if you have time at the end.
- ☒ If you change your mind about an answer, cross it out and put your new answer and any working underneath.

Pearson

- (a) the common speed of the particles immediately after the string becomes taut, (3)
- (b) the magnitude of the impulse exerted on Q at the instant when the string becomes taut. (3)

(Total 7 marks)

Q3

4.

Figure 1

A particle, P , of mass km lies on a fixed rough plane. The plane is inclined to the horizontal at an acute angle θ . A horizontal force of magnitude X acts on P , as shown in Figure 1. The line of action of the force lies in the vertical plane which contains the line of greatest slope of the inclined plane that passes through P . The coefficient of friction between P and the inclined plane is μ .

When $X = mg$, the particle P is in equilibrium and on the point of sliding down the plane.

- (a) Show that $\mu = \frac{k \tan \theta - 1}{k + \tan \theta}$ (10)

- (b) Deduce that, when $k = 1$, θ must be greater than 45° (2)

Q6

7. Two forces, **F** and **G**, act on a particle. The force **F** has magnitude 4 N and acts in a direction with a bearing of 120° and the force **G** has magnitude 6 N and acts due north.

Given that $\mathbf{P} = 2\mathbf{F} + \mathbf{G}$, find

- (i) the magnitude of **P**
(ii) the direction of **P**, giving your answer as a bearing to the nearest degree.
