16.

Figure 4

Figure 4 shows the design for a container in the shape of a hollow triangular prism.

The container is **open at the top**, which is labelled  $ABCD$ .

The sides of the container,  $ABFE$  and  $DCFE$ , are rectangles.

The ends of the container,  $ADE$  and  $BCF$ , are congruent right-angled triangles, as shown in Figure 4.

The ends of the container are vertical and the edge  $EF$  is horizontal.

The edges  $AE$ ,  $DE$  and  $EF$  have lengths  $4x$  metres,  $3x$  metres and  $l$  metres respectively.

Given that the container has a capacity of  $0.75 \text{ m}^3$  and is made of material of negligible thickness,

(a) show that the internal surface area of the container,  $S \text{ m}^2$ , is given by

$$S = 12x^2 + \frac{7}{8x} \quad (5)$$

(b) Use calculus to find the value of  $x$ , for which  $S$  is a minimum.  
Give your answer to 3 significant figures.

(5)

(c) Justify that the value of  $x$  found in part (b) gives a minimum value for  $S$ .

(2)

Using the value of  $x$  found in part (b), find to 2 decimal places,

(d) (i) the length of the edge  $AD$ ,

(ii) the length of the edge  $CD$ .
