You must have:

Mathematical Formulae and Statistical Tables (Blue)

Total Marks

Candidates may use any calculator allowed by the regulations of the Joint Council for Qualifications. Calculators must not have the facility for symbolic algebra manipulation, differentiation and integration, or have retrievable mathematical formulae stored in them.

Instructions

- Use **black** ink or ball-point pen.
- If pencil is used for diagrams/sketches/graphs it must be dark (HB or B). Coloured pencils and highlighter pens must not be used.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions and ensure that your answers to parts of questions are clearly labelled.
- Answer the questions in the spaces provided – *there may be more space than you need.*
- You should show sufficient working to make your methods clear. Answers without working may not gain full credit.
- Values from the statistical tables should be quoted in full. When a calculator is used, the answer should be given to an appropriate degree of accuracy.

Information

- The total mark for this paper is 75.
- The marks for **each** question are shown in brackets – *use this as a guide as to how much time to spend on each question.*

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

PEARSON

1. A tennis club's committee wishes to select a sample of 50 members to fill in a questionnaire about the club's facilities. The 300 members, of whom 180 are males, are listed in alphabetical order and numbered 1 – 300 in the club's membership book.

The club's committee decides to use a random number table to obtain its sample. The first three lines of the random number table used are given below.

319	952	241	343	278	811	394	165	008	413	063	179	749
722	962	334	461	267	114	806	992	414	837	837	657	339
470	684	554	127	067	459	142	920	144	575	311	605	412

Starting with the top left-hand corner (319) and working across, the committee selects 50 random numbers. The first 2 suitable numbers are 241 and 278. Numbers greater than 300 are ignored.

- (a) Find the next two suitable numbers. (1)

When the club's committee looks at the members corresponding to their random numbers they find that only 1 female has been selected.

The committee does not want to be accused of being biased towards males so considers using a systematic sample instead.

- (b) (i) Explain clearly how the committee could take a systematic sample.
- (ii) Explain why a systematic sample may not give a sample that represents the proportion of males and females in the club. (3)

The committee decides to use a stratified sample instead.

- (c) Describe how to choose members for the stratified sample. (3)
- (d) Explain an advantage of using a stratified sample rather than a quota sample. (1)

Question 1 continued

Lined area for writing the answer to Question 1.

Q1

Mark box for Question 1.

(Total 8 marks)

The mean of a random sample of size n is denoted by \bar{X}

- (a) Show that \bar{X} is a biased estimator of α , and state the bias.

(3)

Given that $Y = k\bar{X}$ is an unbiased estimator for α

- (b) find the value of k .

(1)

A random sample of 10 values of X is taken and the results are as follows

3 5 8 12 4 13 10 8 5 12

- (c) Hence estimate the maximum value of X

(3)

(Total 7 marks)

(7)

This image shows a single sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

Man	<i>A</i>	<i>B</i>	<i>C</i>	<i>D</i>	<i>E</i>	<i>F</i>	<i>G</i>	<i>H</i>	<i>I</i>	<i>J</i>
x	123	128	137	143	149	153	154	159	162	168
w	78	93	85	83	75	98	88	87	95	99

- (a) Calculate the value of Spearman's rank correlation coefficient between x and w . (5)
- (b) Stating your hypotheses clearly, test at the 5% level of significance, whether or not there is evidence of a positive correlation between systolic blood pressure and weight. (4)

The product moment correlation coefficient for these data is 0.5114

- (c) Use the value of the product moment correlation coefficient to test, at the 5% level of significance, whether or not there is evidence of a positive correlation between systolic blood pressure and weight. (2)
- (d) Using your conclusions to part (b) and part (c), describe the relationship between systolic blood pressure and weight. (1)

Question 4 continued

This image shows a full page of blank, lined paper. It features approximately 20 evenly spaced horizontal grey lines across its entire width, providing a guide for handwriting or typing. The paper itself is a clean, off-white color. There are no margins, text, or other markings present on the page.

(Total 12 marks)

Q4

		Type of drink preferred			Total
		Tea	Coffee	Hot Chocolate	
Gender	Males	57	26	11	94
	Females	42	47	17	106
Total		99	73	28	200

- (a) Test, at the 5% significance level, whether or not there is an association between type of drink preferred and gender. State your hypotheses and show your working clearly. You should state your expected frequencies to 2 decimal places.

(10)

- (b) State what difference using a 0.5% significance level would make to your conclusion. Give a reason for your answer.

Q5

6. Eight tasks were given to each of 125 randomly selected job applicants. The number of tasks failed by each applicant is recorded.

The results are as follows

Number of tasks failed by an applicant	0	1	2	3	4	5	6 or more
Frequency	2	21	45	42	12	3	0

- (a) Show that the probability of a randomly selected task, from this sample, being failed is 0.3 (2)

An employer believes that a binomial distribution might provide a good model for the number of tasks, out of 8, that an applicant fails.

He uses a binomial distribution, with the estimated probability 0.3 of a task being failed. The calculated expected frequencies are as follows

Number of tasks failed by an applicant	0	1	2	3	4	5	6 or more
Expected frequency	7.21	24.71	37.06	r	17.02	5.83	s

- (b) Find the value of r and the value of s giving your answers to 2 decimal places. (3)
- (c) Test, at the 5% level of significance, whether or not a binomial distribution is a suitable model for these data. State your hypotheses and show your working clearly. (8)

The employer believes that all applicants have the same probability of failing each task.

- (d) Use your result from part(c) to comment on this belief. (1)

This image shows a single sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

This image shows a full page of blank, lined paper. It features approximately 28 horizontal grey lines spaced evenly across the page, typical of standard notebook paper. The lines are thin and light grey, set against a plain white background. There are no margins, text, or other markings on the page.
