Statistics S1

Advanced/Advanced Subsidiary

Friday 5 June 2015 – Morning

Time: 1 hour 30 minutes

Paper Reference

WST01/01

You must have:

Mathematical Formulae and Statistical Tables (Blue)

Total Marks

Candidates may use any calculator allowed by the regulations of the Joint Council for Qualifications. Calculators must not have the facility for symbolic algebra manipulation, differentiation and integration, or have retrievable mathematical formulae stored in them.

Instructions

- Use **black** ink or ball-point pen.
- If pencil is used for diagrams/sketches/graphs it must be dark (HB or B). Coloured pencils and highlighter pens must not be used.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions and ensure that your answers to parts of questions are clearly labelled.
- Answer the questions in the spaces provided
– *there may be more space than you need.*
- You should show sufficient working to make your methods clear. Answers without working may not gain full credit.
- Values from the statistical tables should be quoted in full. When a calculator is used, the answer should be given to an appropriate degree of accuracy.

Information

- The total mark for this paper is 75.
- The marks for **each** question are shown in brackets
– *use this as a guide as to how much time to spend on each question.*

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

PEARSON

where k is a constant.

- (a) Find the value of k .

(2)

- (b) Find the probability distribution of X .

(2)

Question 1 continued

(Total 4 marks)

Q1

This image shows a full page of blank, lined paper. It features approximately 28 horizontal grey lines spaced evenly apart, typical of standard notebook paper. The lines extend across the entire width of the page, leaving small margins at the top and bottom. There are no vertical lines, text, or other markings present.

Q2

(Total 13 marks)

Length of time employed, x years	Female	Male
$x < 4$	9	16
$4 \leq x < 10$	14	20
$10 \leq x$	7	24

(a) Find the probability that the administrator is female.

(1)

(b) Given that the administrator has been employed by the company for less than 4 years, find the probability that this administrator is male.

(2)

(c) Given that the administrator has been employed by the company for less than 10 years, find the probability that this administrator is male.

(2)

(d) State, with a reason, whether or not the event ‘selecting a male’ is independent of the event ‘selecting an administrator who has been employed by the company for less than 4 years’.

(3)

Q3

Question 4 continued

(Total 9 marks)

[illegible]

Q5

[illegible]

(Total 9 marks)

7. A doctor is investigating the correlation between blood protein, p , and body mass index, b .

He takes a random sample of 8 patients and the data are shown in the table below.

Patient	A	B	C	D	E	F	G	H
b	32	36	40	44	42	21	27	37
p	18	21	31	39	21	12	19	70

- (a) Draw a scatter diagram of these data on the axes provided.

(2)

The doctor decides to leave out patient H from his calculations.

- (b) Give a reason for the doctor's decision.

(1)

For the 7 patients A, B, C, D, E, F and G ,

$$S_{bp} = 369, \quad S_{pp} = 490 \quad \text{and} \quad S_{bb} = 423 \frac{5}{7}$$

- (c) Find the product moment correlation coefficient, r , for these 7 patients.

(2)

- (d) Without any further calculations, state how r would differ from your answer in part (c) if it was calculated for all 8 patients.

(1)

(Total 6 marks)

8.

Figure 1

The histogram in Figure 1 summarises the times, in minutes, that 200 people spent shopping in a supermarket.

- (a) Give a reason to justify the use of a histogram to represent these data. (1)

Given that 40 people spent between 11 and 21 minutes shopping in the supermarket, estimate

- (b) the number of people that spent between 18 and 25 minutes shopping in the supermarket, (3)

- (c) the median time spent shopping in the supermarket by these 200 people. (2)

The mid-point of each bar is represented by x and the corresponding frequency by f .

- (d) Show that $\sum fx = 6390$ (2)

Question 8 continued

Given that $\sum fx^2 = 238\,430$

(e) for the data shown in the histogram, calculate estimates of

- (i) the mean,
- (ii) the standard deviation.

(3)

A coefficient of skewness is given by $\frac{3(\text{mean} - \text{median})}{\text{standard deviation}}$

(f) Calculate this coefficient of skewness for these data.

(1)

The manager of the supermarket decides to model these data with a normal distribution.

(g) Comment on the manager's decision. Give a justification for your answer.

(2)

This image shows a single sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

Question 8 continued

This image shows a single sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

Leave
blank

Question 8 continued

Handwriting practice area with 28 horizontal lines.
