Figure 4

Figure 4 shows a vertical cylindrical tank of height 225 cm containing a liquid. The liquid is leaking out of a hole  $P$  in the base of the tank.

At time  $t$  minutes after the leaking starts, the height of the liquid in the tank is  $h$  cm.

The rate at which the height of the liquid in the tank is decreasing, at any time  $t$  minutes, is modelled as being proportional to the square root of the height of the liquid in the tank.

When  $t = 0$ ,  $h = 225$  and when  $t = 125$ ,  $h = 100$

The liquid stops leaking from the tank when  $h = 0$

By forming and solving a differential equation,

(a) show that the model leads to the equation

$$h = (15 - 0.04t)^2 \quad 0 \leq t \leq a$$

stating the value of the constant  $a$ .

(7)

(b) Find, according to the model, the time taken for the height of the liquid in the tank to decrease from 100 cm to 50 cm. Give your answer to the nearest minute.

13. Ellen bungee jumps from a high platform.

Ellen's distance above the ground,  $H$  metres, is modelled by the equation

$$H = 60 + \frac{50 \cos(0.5t)}{e^{0.2t}} \quad t \in \mathbb{R}, t \geq 0$$

where  $t$  is the time measured in seconds from when she jumps from the platform.

(a) (i) Find, in simplest form,  $\frac{dH}{dt}$

(ii) Hence show that when  $\frac{dH}{dt} = 0$ , the values of  $t$  satisfy the equation

$$\tan(0.5t) = -0.4$$

(5)

Figure 6

Figure 6 shows a sketch of  $H$  against  $t$ . The point  $Q$ , shown in Figure 6, represents the greatest distance above the ground to which Ellen bounces after jumping from the platform.

Using the answer to (a)(ii),

(b) find the value of  $t$  and the value of  $H$  at the point  $Q$ , giving your answers to 3 significant figures.
