Pearson Edexcel International Advanced Level In Statistics S3 (WST03) Paper 01

Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at www.btec.co.uk. Alternatively, you can get in touch with us using the details on our contact us page at www.edexcel.com/contactus.

Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

General Instructions for Marking

- 1. The total number of marks for the paper is 75.
- 2. The Edexcel Mathematics mark schemes use the following types of marks:
 - **M** marks: method marks are awarded for 'knowing a method and attempting to apply it', unless otherwise indicated.
 - A marks: Accuracy marks can only be awarded if the relevant method (M) marks have been earned.
 - B marks are unconditional accuracy marks (independent of M marks)
 - Marks should not be subdivided.

3. Abbreviations

These are some of the traditional marking abbreviations that will appear in the mark schemes.

- bod benefit of doubt
- ft follow through
- the symbol $\sqrt{}$ will be used for correct ft
- cao correct answer only
- cso correct solution only. There must be no errors in this part of the question to obtain this mark
- isw ignore subsequent working
- awrt answers which round to
- SC: special case
- oe or equivalent (and appropriate)
- dep dependent
- indep independent
- dp decimal places
- sf significant figures
- * The answer is printed on the paper
- The second mark is dependent on gaining the first mark
- 4. All A marks are 'correct answer only' (cao.), unless shown, for example, as A1 ft to indicate that previous wrong working is to be followed through. After a misread however, the subsequent A marks affected are treated as A ft, but manifestly absurd answers should never be awarded A marks.

- 5. For misreading which does not alter the character of a question or materially simplify it, deduct two from any A or B marks gained, in that part of the question affected.
- 6. If a candidate makes more than one attempt at any question:
 - If all but one attempt is crossed out, mark the attempt which is NOT crossed out.
 - If either all attempts are crossed out or none are crossed out, mark all the attempts and score the highest single attempt.
- 7. Ignore wrong working or incorrect statements following a correct answer

Special notes for marking Statistics exams (for AAs only)

- Any correct method should gain credit. If you cannot see how to apply the mark scheme but believe the method to be correct then please send to review.
- For method marks, we generally allow or condone a slip or transcription error if these are seen in an expression. We do not, however, condone or allow these errors in accuracy marks.

| Question Number | | Scheme | Marks |
|--------------------|--|--|------------------------|
| 1 (a) | Rankings 2, 9, 7, 8, 6, 5, 1, 4, 3, 10 | | |
| | _ | 9+0+16+0+16+16+25+0+16+0[= 98] | M1 |
| | $r_s = 1 - \frac{6 \times '98'}{10(10^2 - 1)} = 0.4060$ awrt 0.406 | | M1 A1 |
| | | | (4) |
| (b) | $H_0: \rho =$ | $0 	 H_1: \rho > 0$ | B1 |
| | Critical ' | Value $r_s = 0.7455$ or CR: $r_s 0.7455$ | B1 |
| | Not in th | ne critical region/not significant/Do not reject H ₀ | M1 |
| | | insufficient evidence of a positive correlation between the final position of a team in the English Premier League and their average match day attendance . | A1ft |
| | | · · · · · · · · · · · · · · · · · · · | (4) |
| | | Notes | Total 8 |
| (a) | B1 | For all 8 correct missing rankings. If in the table and in the working space and different award the highest scoring response. | ent then |
| | M1 | For an attempt at $\sum d^2$ (at least 5 correct values seen, with an attempt to add) May by 98 | e implied |
| | M1 | For using $1 - \frac{6\sum d^2}{10(99)}$ with their $\sum d^2$ (you will need to check their $\sum d^2$ if no val | ue shown) |
| | A1 | awrt 0.406 Allow $\frac{67}{165}$ NB awrt 0.406 or $\frac{67}{165}$ scores 4/4 | |
| <i>a</i>) | B1 | For both hypotheses correct. Must be in terms of ρ or ρ_s (Condone p). Must be attack | ched to H ₀ |
| (b) | | and H ₁ | |
| | B1 | For CV of 0.7455 | |
| | M1 | A correct statement ft part (a) and their CV- no context needed but do not allow cont non contextual statements. This may be implied by a correct contextual conclusion or | _ |
| | A1ft | Correct conclusion in context. Must mention words in bold oe, ft their r in part (a) are critical value. | |

| Question Number | | Scheme | | |
|--------------------|--|---|--------------|--|
| 2 (a) | [0×5] | $\frac{+1\times38+2\times32+3\times17+4\times7+5\times1}{100} [=1.86] *$ | B1* | |
| | | | (1) | |
| (b) | [r = 1.2] | 203] because total expected frequency must equal 100 | B1 | |
| | | | (1) | |
| (c) | [The manager needed to do this] to ensure that [all] expected frequencies were greater than 5 | | | |
| | | | (1) | |
| (4) | $H_0: Pc$ | bisson (distribution) is [a] suitable/ sensible (model) | D1 | |
| (d) | H ₁ : Poisson (distribution) is not [a] suitable/ sensible (model) | | B1 | |
| | v = [5-1-1] = 3 | | B1 | |
| | $c_3^2(0.01)$ | 1) = 11.345 \Rightarrow CR: $X^2 \dots 11.345$ | M1 | |
| | _ | n the CR/Reject H ₀] | A1ft | |
| | Suffici | ent evidence to say that Poisson is not a suitable model | | |
| | | N | (4) | |
| | | Notes For a correct method to show the mean is 1.86 (Janera use of 6 × 0) | Total 7 | |
| (2) | D1* | For a correct method to show the mean is 1.86 (Ignore use of 6×0) | | |
| (a) | B1* Allow $\frac{[0]+38+64+51+28+5}{100}$ | | | |
| | | 100 | 1 , , 1 | |
| (b) | B1 | A correct explanation referring to the fact that total/sum expected frequency/ E_i must C_i | | |
| | | observed frequency e.g. $100 - (15.567 + 28.955 + 26.928 + 16.696 + 7.763 + 2.888) = 7$ | | |
| (a) | D1 | A correct explanation referring to the fact that [all] E_i /expected frequencies/values nee | | |
| (c) | B1 | greater than 5 e.g because expected 5 customers and [expected] 6 or more customers a than 5 Allow $2.88 < 5$ and $1.203/r < 5$ or $4.091 < 5$ | re both less | |
| (d) | B1 | Both hypotheses correct. Must mention Poisson/Po at least once. | | |
| | B1 | v = 3 This mark can be implied by a correct critical value of 11.345 if no DoF given | | |
| | M1 | For 11.345 or ft their degrees of freedom $\left[c_{4}^{2}(0.01) = 13.277\right]$ | | |
| | A1ft | A correct conclusion based on their χ^2 critical value. Must mention Poisson | | |

| Question Number | | Scheme | Marks |
|--------------------|---------------------------------------|---|-------------|
| 3 (a) | $p = \frac{118}{40}$ | | B1 |
| | $[q=]^{350}$ | $\frac{0.05 - 40('2.95')^2}{39} = 0.05$ | M1 A1 |
| | | | (3) |
| (b) | | $\mathbf{H}_{1}: \mu_{A} < \mu_{B}$ | B1 |
| | 2. | .65-'2.95' | |
| | $z = \pm \frac{1}{\sqrt{0}}$ | $\frac{0.65 - 2.95'}{0.07 + 0.05'}$ | M1 M1 |
| | · · · · · · · · · · · · · · · · · · · | | Al |
| | = 3.827 CV = 1.64 | | B1 |
| | - | There is significant evidence to support the biologist's belief | M1 A1ft |
| | Kejeci II | 1 There is significant evidence to support the biologist's benef | (7) |
| (c) | I arge car | mple sizes so | (1) |
| (c) | | 1 | B1 |
| | | nple means are normally distributed (CLT) | |
| | $S_A^2 = \sigma_A^2$ | and $s_B^2 = \sigma_B^2$ | B1 |
| | | | (2) |
| | | Notes | Total 12 |
| (a) | B1 | 2.95 only | |
| | M1 | For use of $\frac{\sum x^2 - n\overline{x}^2}{n-1}$ oe ft their \overline{x} May be implied 0.05 provided no incorrect work | king seen |
| | A1 | cao | |
| (b) | B1 | Both hypotheses correct. Allow equivalent hypotheses. Must be in terms of μ | |
| . , | M1 | For the denominator. Ft their 0.05 | |
| | M1 | Fully correct. Ft their 2.95 and their 0.05 | |
| | A1 | awrt 5.83 allow $ z = 5.827$ accept $p = 2.8(1) \times 10^{-9}$ | |
| | B1 | CV = 1.6449 or better | |
| | M1 | A correct conclusion not in context ft their z value and CV or a correct p value (2 sf) | |
| | | ft their z value and their CV (NB their CV must be consistent with their z value) or a | |
| | A1ft | value (2 sf). Correct conclusion in context, need belief/claim . May be in words with | weights and |
| | D4 | region e.g. the weights in region A are smaller | 1 |
| (c) | B1 | Must comment on both sample means e.g. the sample means are normally distributed | |
| | B1 | Must comment on both variances/standard deviations e.g. sample variances can be u values for the population variances | sed as |
